

Safe & Healthy Physical Security Screening with Evolv Express®

Create a Safe Haven for Patients, Staff, and Visitors

Hospitals and other healthcare facilities can bear the undue burden of threats from workplace violence and other forms of interpersonal attacks that can put their staff, visitors, and patients at risk. Your security and operations teams are tasked with protecting everyone in their care, but traditional metal detectors can result in unsafe lines at entryways, creating a soft target scenario themselves and significantly increasing the anxiety of your patients and visitors.

Safety Without Compromise – Introducing Evolv Express®

Evolv Express® is the world's only AI-based touchless security screening solution that improves the visitor experience without sacrificing security. With Evolv Express, your guests can pass through screening without divesting or breaking stride.

Intelligent Security Screening

Evolv Express combines advanced sensors, cameras, and artificial intelligence (AI) to identify threats while ignoring harmless personal items. When a potential threat is detected, real-time image-aided alerts show guards precisely where the potential threat is located on a person or in their bag.

Unlike the invasive pat downs, wandings, bag checks, and long lines experienced with metal detectors, Evolv Express keeps your high-volume entrances flowing by reliably detecting guns and other weapons while visitors walk through at a natural pace, carrying their phones, bags and other harmless items.

Ensure that everyone who enters your facility is safe and protected with AI-powered weapons detection that is 10 times faster than metal detectors—screening 3,600 people an hour. Screening for possible weapons threats at every entryway ensures your staff feel safer, maintains a sense of dignity and welcome for all visitors and patients, and helps to prevent those intending to do harm.

Only Evolv Express®

Fast, Efficient Threat Screening

Screens 3,600 ppl/hr — 10X faster than metal detectors — for a line-free experience. No stopping. No emptying pockets or removing bags.

Flexible Deployment Options:

Deploy for indoor or outdoor screening. Easy to set up and move. Multiple deployment options including single- or dual-lane configurations.

Simple Operation for Faster Resolution:

Real-time view of the exact location of potential threats on a person or their bag. Enables faster resolution and reduces physical contact.

Integration & Performance Analytics:

Integrate with your broader security infrastructure. Improve planning using the analytics dashboard to improve staffing, training, and traffic flow at every entrance, at various times and during the peaks and valleys of the daily cycle.
